

AMENDMENTS TO THE SPECIFICATION

Please delete the present Abstract of the Disclosure.

Please add the following new Abstract of the Disclosure:

An electronic medical record information management system and ~~an electronic medical record information management method~~ are provided. The system includes an electronic medical record information manager; and an electronic medical record shower, wherein said manager stores electronic medical records of patients that are transmitted from said shower, and transmits said records by a request transmitted from said shower to said manager, and said shower transmits records that are made to said manager, and transmits a request to transmit said records to said manager, and shows said records transmitted from said manager. ~~in which a medical institute such as a medical practitioner and a small hospital, which have some difficulty to introduce and operate a large electronic medical record information management system, can use, are provided. A user makes electronic medical records of patients by using an electronic medical record terminal in a hospital information system, and transmits the electronic medical records of the patients made at the electronic medical record terminal to an electronic medical record information management center system. The user requests to transmit an electronic medical record of a patient storing in the electronic medical record information management center system. The method includes making electronic medical records of patients; storing said records; transmitting said records; storing said transmitted records; transmitting said records upon request; storing said transmitted records; and showing said electronic medical records.~~

control server in the electronic medical record information management center system takes out the electronic medical record of the patient requested by the user from an electronic medical record storing server in the electronic medical record information management center system, and transmits this electronic medical record of the patient to the hospital information system. The electronic medical record terminal shows this electronic medical record of the patient to the user. The electronic medical record terminal also transmits an electronic medical terminal added new information to the electronic medical record information management center system. The control server makes the electronic medical record storing server store this electronic medical record added the new information.
